

Petrochemicals Product Guide

Protecting People, Property and our Planet.

The safety experts

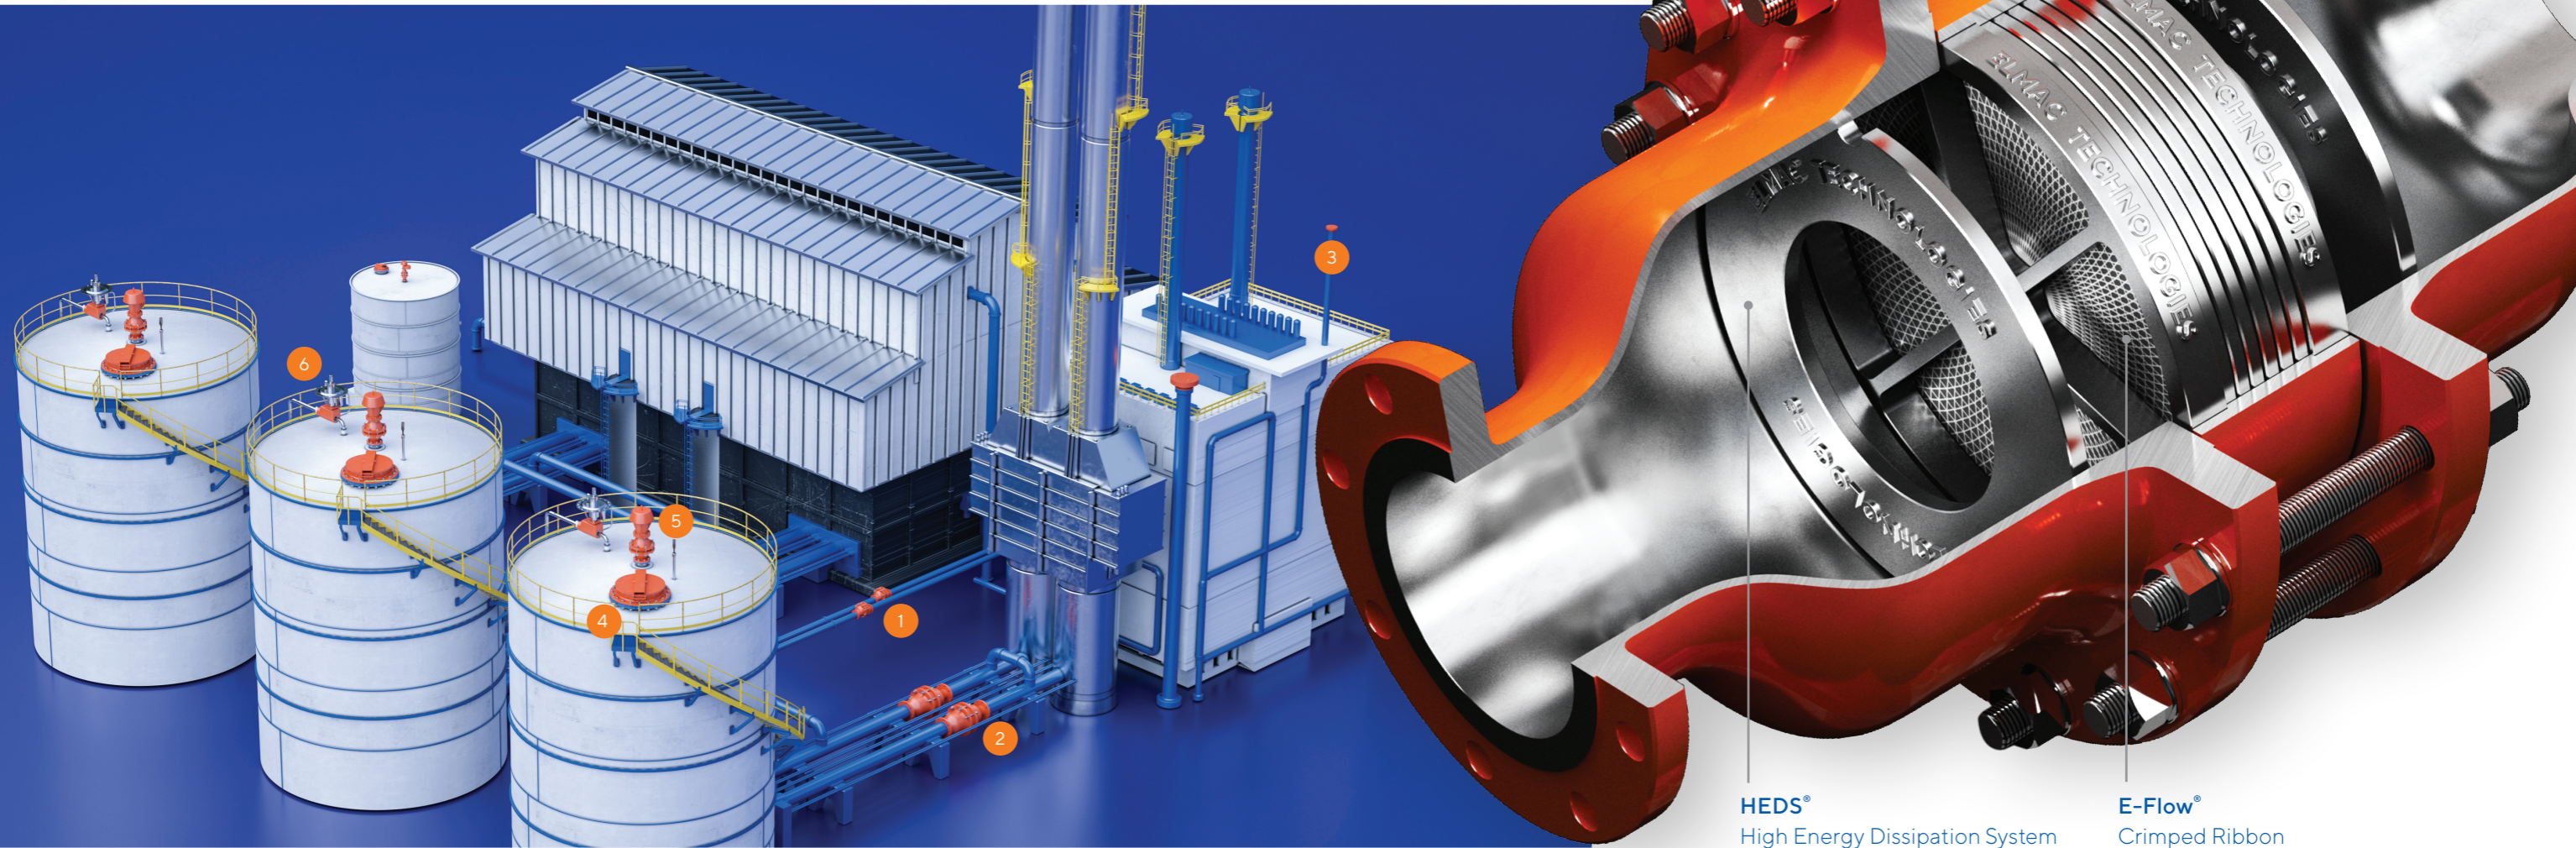

Elmac Technologies works closely with some of the world’s leading petrochemical producers to provide a variety of bespoke valve and explosion protection equipment. These products provide the highest levels of protection and are compliant with ATEX and other regulatory bodies.

Petrochemical manufacturers are facing increasing regulatory pressures that require all storage tanks to be equipped with adequate operational and emergency venting, as well as explosion protection devices for

use in potentially combustible atmospheres that are prone to BLEVE (engulfment by fire) incidents.

In this highly competitive market, our customers seek solutions that will provide higher returns on investment through higher yields and lower operating costs, by way of increased yields and lower operating costs.
